Objections To Claims

Claims 1-10 are objected to under 37 CFR § 1.75(a) for the following reasons:

In claim 1 and related dependent claims 2-10, the reference to a "compressor" (claim 1, line 14) is ambiguous since the claims include two different compressors, "a pilot air compressor" (claim 1, line 3), and "a compressor for the gas turbine" (claim 1, line 5). It appears that the compressor referred to in line 14 is in fact the pilot air compressor and it should be properly identified as such.

Allowable Subject Matter

Claims 11-20 are allowed, and claims 1-10 will be allowed if amended to overcome the objections set forth above.

Reasons For Allowance

The invention in this case is a pilot air supply system for a gas turbine engine. This system comprises a pilot air or booster compressor along with a bypass passage. Such systems are known in the art but none of the references of record show or fairly

suggest such a system which includes throttle valves in both a main pilot air passage and the bypass passage, and which further includes a platform for the bypass compressor adjacent the gas turbine's combustor or proximate to the gas turbine.

The patents to Nishijima and Yamanaka et al '826 are typical of the prior art. In Figure 2 of Nishijima for example; booster compressor 11 cooperates with bypass line 30_A including throttle valve 13, but main pilot air line 15 includes no corresponding throttle valve. On the other hand, Figure 5 of Yamanaka shows a system in which main pilot air line 11 for booster compressor 10 includes throttle valve 20, but bypass passage 15 includes no further throttle valve. Furthermore, the prior art includes no suggestion for mounting the booster compressor on a platform rather than simply attaching it to the gas turbine engine. A system including the claimed combination of two throttle valves, a platform-mounted pilot/booster compressor, and the other recited features is neither taught nor suggested by the any of the references of record, and the claimed invention is therefore considered patentable over the prior art.
